

The partnership of **Henry & Hymas** was formed in 1985 and has acted on many thousands of projects, individually valued between \$500,000 & in excess of \$100 million. This work has been carried out in every state of Australia, in addition, commissions have successfully been completed on behalf of Australian based companies internationally.

TELECOMMUNICATIONS

Focus on

The variety of expertise that **Henry & Hymas** provides to the construction industry is exemplified throughout the company website <http://www.henryandhymas.com.au/>. The following services are specifically relevant telecommunications infrastructure deployment.

Henry & Hymas appreciates the technical issues relevant to the various disciplines involved in the network implementation. **H&H's** property, planning and design teams collaborate with project managers, providing the most efficient co-ordination of skills at all stages-from site selection through to handover. **Henry & Hymas** provide its clients with a single point of contact for all communications, liaison and management responsibilities.

Property Acquisition

Property acquisition for telecommunications differs significantly from other industries. We are familiar with the intricacies of the Telecommunications Act, and approach each location mindful of planning, design, construction and transmission issues. A successful property negotiation is vital for the timely progression of sites through to the next stage, and our property controllers carefully select sites with the highest potential for success.

Planning and Environment

Each site has its own set of planning and environment needs. We understand the legislation including local authority requirements, federal government processes and the recently introduced ACIF Code. Our investment in developing and maintaining relationships with local governments ensures council submissions are lodged and processed with minimal uncertainty.

Engineering Design

Our design team is experienced in the **design and operation of telecommunication facilities** and this experience is transferred into the design solutions making the finished product not only compliant with specifications, regulatory requirements and Australian Standards, but also highly practical and well suited for the intended purpose. **Henry & Hymas** project leaders ensure that all disciplines work together, one design package encompasses any survey, structural, civil, electrical, mechanical, and hydraulic elements affecting the site.

Project Management

Henry & Hymas continuing success relies on our efficient and skillful management team. Our current success is due to our ability and willingness to work closely with and adapt to the requirements of our clients. With this we have been successful in completing multiple projects both on time and to our client's satisfaction. Contributing factors include:

- Believing our clients success is our success.
- Offering effective solutions with minimal fuss.
- Our management teams vast experience in the industry

H&H's strong leaders coupled with the application of procedures focused on the key areas of project management as defined in PMBOK, enables the early identification of critical path activities thus ensuring the successful implementation of all projects. Procedures are continuously improved and cover the key areas of project management as defined in PMBOK. **Henry & Hymas** advocates working in a performance-based workload allocation environment and the use of Key Performance Indicators forms an essential element of this approach.
